

CCP CONNECTED COLD CHAIN PLATFORM

SHAREHOLDER UPDATE

JUNE 2017

KEY HIGHLIGHTS

- **CCP continues to build a strong sales pipeline**
- **More customers on-board in Australia and North America**
- **Capital raise to position CCP for Growth**

FROM THE CEO

Quite often I'm asked: why is CCP different? And what does the sales pipeline look like? They're two good questions which I thought I'd cover in this shareholder update.

The CCP solution has diverse applications in very large markets. For example, CCP is initially targeting the food industry in Australia and North America. The combined Australian and US food industry presents us with a total addressable market that includes an estimated 470 million monitoring points. According to market research (www.marketsandmarkets.com), the global cold chain monitoring market is estimated to reach USD\$6.23b by 2022. Drivers for adopting the CCP solution in food sectors include greater attention to food quality, community pressure to reduce food waste and intensifying food safety compliance.

CCP is differentiating itself by offering a true enterprise solution, communication network diversity and simple low-cost business model.

CCP presents a unique offering to the market:

- ✓ **True Enterprise Solution**
 - Enterprise level access
 - Business intelligence analytics
 - Tabular and graphical reporting
 - System notifications (alerts)
 - User configurable firmware and software
 - Digital food safety records (to replace manual paper-based records)
- ✓ **Communication Network Diversity**
 - WiFi
 - Bluetooth (BLE)
 - SigFox
 - RF (Gazelle)
 - NFC (Near Field Communications)
- ✓ **Simple and Low Cost (SaaS model)**
 - Low monthly fee
 - No hardware cost
 - Rapid scalable deployment (plug & play)

CCP's advanced enterprise platform, coupled with its low-cost IoT devices which operate across multiple communication networks offers a unique solution

Providing enterprise level access to business intelligence, food safety records and integration to food safety systems is critical to large corporations. In these environments, we address system administration challenges of remote sensor configurations, managing alerts and notifications settings, and monitoring a range of critical control points (not just temperature). Not all competitors can do this; and on the back of our recent Sigfox announcement, we're seeing growing interest in our ability to support more than just WiFi connectivity. For enterprise applications, CCP offers network communication diversity and flexibility. When combined with our SaaS model (with no upfront hardware), we stand out from the crowd.

CCP continues to secure high-profile customers (like the Stratosphere Hotel & Casino in Las Vegas, Nevada, USA); and since launch (late 2016), CCP has built a significant sales pipeline.

Since launch late 2016, CCP has built a significant sales pipeline

Pipeline of potential monitoring points in Australia and US as at mid May 2017

Looking at a quick snapshot of our sales pipeline in May 2017, we estimate our current customers and trial accounts have more than 47,000 monitoring points when combined. This provides a solid foundation for our sales teams. When I look at the qualified sales prospects in our pipeline, there's more than 74,000 total monitoring points when combined. When very early stage sales prospects (i.e. unqualified leads) are considered, the numbers are larger.

Obviously, no reliance should be placed upon any sales pipeline projection. Sales are subject to market influences and contingent upon matters, risks and decisions outside our control. Sales pipeline information should not be considered as a representation of future revenues; I'm providing this information to give you a better insight into our commercialisation progress. Some of the opportunities in our sales pipeline will take time; however, current customer trials and commercial uptake is positive.

I hope you enjoy reading customer news. It's great to see continued momentum in the business; and importantly, it's terrific to see customer's embracing the CCP solution to support their business objectives.

Michael White
Executive Director & CEO
CCP Technologies Limited

Did you know? According to the CSIRO, holding perishable foods at correct refrigerated temperatures can substantially reduce the rate at which food will deteriorate. Low temperatures slow down the growth of microorganisms and the rate of chemical (including enzymic) changes in food. These are two of the main causes of food spoilage.

CAPITAL RAISE: RIGHTS ISSUE AND PLACEMENT

CCP has announced a AUD\$1.32m capital raise through a non-renounceable entitlement issue and placement.

Rights Issue

- CCP is raising approximately \$805,000 by way of a non-renounceable entitlement issue of one fully paid ordinary share in CCP for every five shares held by eligible shareholders at an issue price of \$0.017 per share

Placement

- CCP has raised \$518,895 by way of a placement on May 25 to sophisticated investors, at the Rights Issue price of \$0.17 per share

Purpose

- Net proceeds of the Placement and Rights Issue will be used to meet continued business development and working capital requirements

CCP @ Foodservice Australia 2017

CCP exhibited at Foodservice Australia in Melbourne 28-30 May. There was plenty of interest in our temperature monitoring solution; and plenty of leads to now follow-up. During the show, we kept an eye on the fridges for Slape & Sons Sausages – and yes, we can report their sausages are terrific – and Hot Price Hospitality who were demonstrating their Adande freezer.

We were delighted to see John McFadden from the Park Royal Hotel at Darling Harbour (one of our customers) doing his stuff as a judge in the Chef of the Year – a terrific reflection of John's professional standing in the industry; and we appreciate John directing his colleagues to our stand. And yes, that's our CEO showing a new smart sensor tag to the COO. More on our progress with new products in next month's Shareholder Update.
